

# Planters

## DETAIL SHEET 7

Grating/Rooster

### Notes:

- 1 The diameter of the weep holes must be sufficient to enable the waterproofing system to be dressed into it, and still allow the required amount of water through.
- 2 The placement of planters should be considered carefully, to ensure that they do not interfere with sensitive areas such as expansion joints, outlets etc.
- 3 Care must be taken not to damage the waterproofing system while the protection is being installed.
- 4 The suitability of the waterproofing system should be checked at the design stage with regard to soils, acids, alkalis and root growth etc, to prevent damage from going unnoticed.
